

Most changes are in bold. Changes were also announced in recitation and via Canvas announcement.

- Added assumptions to Extra Credit, Add\_Regions. You can assume that it is called before anything. Also, pad the region name, but not the data.
- Updated client and server output formats to print request and response code and data for any request or response on both client and server, delimited by a space.
- Updated poll change propagation. No upwards propagation: polls changes should be reflect in the children of a region, but not upwards in the parent.
- Changes to Remove\_Votes instructions: If a candidate does not exist in the region, or the number of votes to be subtracted is greater than the total number of votes, this is an illegal subtraction and an error response is necessary.
- Changes to hints and assumptions. Maximum message size is 256 bytes. (There may be issues with this and the current version of the server due to a typo, try 255 bytes. The updated server will work properly with this.)

---

Changes from April 27th (**ALL CLARIFICATIONS**)

- Added request region to request print outs. This was left out by mistake.
- Added spaces to examples for padding region names
- Clarified Open\_Polls error handling and Close\_Polls error handling
- Clarified IS data
- Fixed some typos related to region name padding and semicolons in the example.
- Updated rubric with more detail about test cases.
- Added some more detail to submission instructions.
- Added more detail about executable names.
